

# AVOCENT® UNIVERSAL MANAGEMENT GATEWAY APPLIANCE

## Rack Mounting Guide

### 1. Attaching the brackets to the appliance

Remove the four black screws from each side of the Avocent® Universal Management Gateway appliance. Position each bracket so it is not covering the side vents of the appliance. Secure the mounting brackets to the appliance using the eight supplied chrome screws.

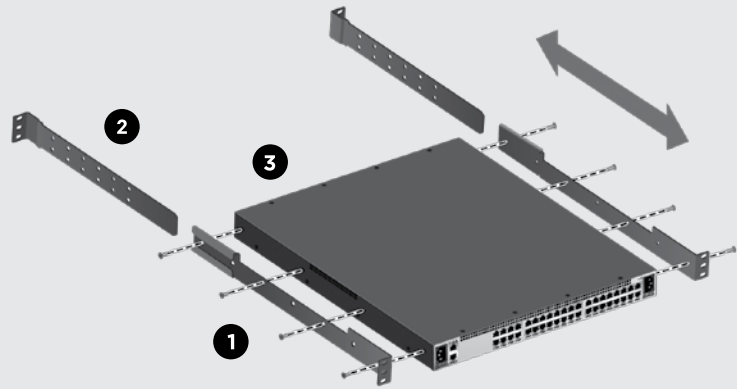

### 2. Installing the slide-rail brackets to the rack

Loosely attach the two slide-rail brackets to the front of the rack using the appropriate screws for your rack.

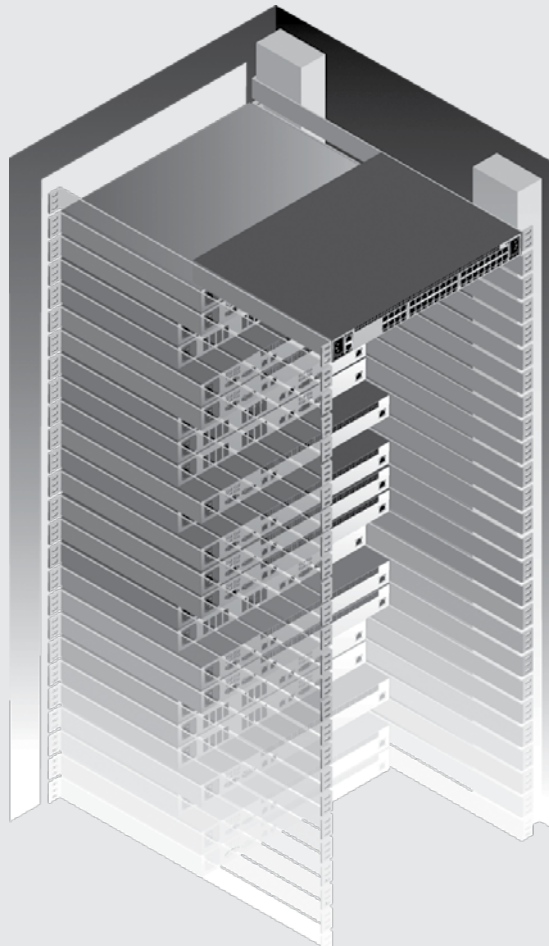

### 3. Installing the appliance in the rack

From the rear of the rack, slide the appliance into the same U position where the slide rails are mounted. Ensure that both slide rails are securely inserted into the appliance bracket. Tighten the rack screws for both the appliance bracket and the slide rails.

Rack Mounting an Appliance

Installing the Appliance in a Rack

**NOTE:** The wall mounting kit is optional and is not included with the appliance; it must be purchased separately. For details on how to purchase the wall mounting kit, contact your Vertiv representative.

## OVERVIEW

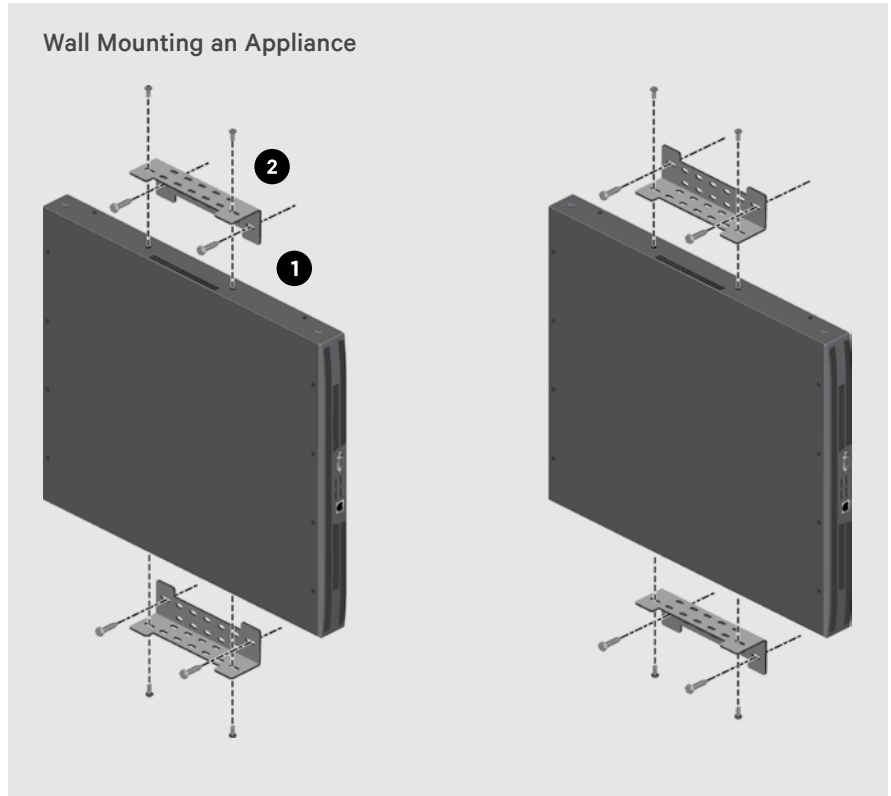

Your optional wall mounting bracket kit contains two brackets. Either may be used as a left or right bracket. In addition, the brackets may be attached with the slots facing up or down. Mount the brackets so that the front face of the appliance is facing sideways and not toward the floor or ceiling.

### 1. Mounting the brackets to a plywood wall

Using the slots on the bracket or the supplied template as a guide, mark the holes on the wall where the brackets are to be fastened. A minimum of two holes for each bracket should be marked. Use a 3/16-inch drill bit to drill guide holes at the marked positions. Using 1/4 inch by 1 inch hex lag screws (not included with the wall mounting kit), secure each bracket to the plywood wall, using at least two screws for each bracket.

### 2. Attaching the appliance to the brackets

Remove the two middle truss-head screws from each side of the appliance. It is important to remove only the middle two screws allowing the cover of the appliance to stay secured. Align the holes in the appliance with the holes in the mounted brackets, and using the thumb screws provided with the wall-mounting kit, secure the appliance to the brackets with the slots facing up or down, as illustrated.
